

QUALITY MANAGEMENT

The Bachelor of Manufacturing Management (BMM) degree in Quality Management responds to increased employer demand for employees with a solid background in manufacturing techniques combined with a qualification in quality. Many companies that outsource production discover the need for more stringent quality assurance of products made in foreign countries, causing an increased need for graduates with a good grounding in quality management. The high demand is concomitant with above average starting salaries. The quality management degree was designed with learner outcomes designed to: (1) meet the employ-ability requirements of industry; (2) incorporate changing consumer interests, attitudes, and concerns for quality management; (3) offer students an attractive, well differentiated educational option to complete their bachelor level education; (4) utilize existing intellectual and physical resources.

Some golden nuggets to consider...

CAREER PATHS

- Total Quality Management
